

This week we have:

- Took part in different science experiments with Mr Bratt and Mr Berry.
- Investigated magnets and magnetic materials.
- Investigated forces and how cars move on different surfaces.
- Found fractions of amounts.
- Written mummification instructions.

This week has been science week and we have had a very busy week. Firstly I would like to say a big thank you to Mr Bratt who came in to demonstrate a range of scientific experiments involving materials. The class particularly enjoyed the memory material and the non-Newtonian liquids. The class also had a visit from Mr Berry and conducted an investigation into popping candy using microscopes, equipment and Chocolate!

I would also like to say that I have been really impressed with the science week homework projects children have brought in. They are fantastic and there is a wide range of experiments which have been conducted investigating all kinds of different things. Well done to all those who got involved and helped celebrate the subject of science, I think there are some future scientists in our class.

Next week we will be finishing our fractions work and then recapping and going over some of our previous maths work from this year. In English we will be writing Egyptian diaries and in PE we will be building up our hockey skills and playing some small matches. Next Thursday (22nd) is also Book Look at 2:30pm.

I have just sent out spellings and some times table practice for this week's homework. Spellings include the 'zhun' sound spelt sion and there are also some common exception words to learn.

Have a great weekend

The Year 3 Teaching Team.
