

A su	bstance that can dissolve some metals.
	resistance ctional force that slows an object down as it moves through the air.
	PY etal that is created by combining two or more metals, or a metal with a metal.
	act ull or draw things together.
	ance Ite in which things are of equal force or weight.
	boss ecorate the surface of an object with a design that is raised to stand out.
_	ineer rson who designs and builds engines and machines.
for A pu	
	ce meter strument that is used to measure the strength of forces, in newtons.
A for slow	tion rce that is created when two surfaces rub against each other. It makes things down and warms them up.
gra	vity rce that, on Earth, pulls everything down to the ground.
incre	er r or handle that moves around a fixed point and, when pushed or pulled, eases the force, making it easier to move something. Scissors and toilet handles examples of levers.

	gnetic Ig as a magnet, attracting iron and steel objects.
•••••	
	gnetic pole north or south pole of a magnet, or the Earth.
	gnetism g able to attract iron and steel objects.
	lleable ble of changing shape and not breaking when hammered or pressed.
	tal id material that conducts heat and electricity and that is usually hard, strong shiny.
	tallic a metal or partly made of metal.
A sol	ieral id substance that naturally forms into crystals in the ground. Some metals are ained in ore rocks as minerals.
	lten iquid state, due to great heat. Metals become molten when heated in a ace.
The a	tion action of moving or being moved.
nev	vton es are measured in newtons (N). 100 N is a greater force than 10 N.
	lise ombine with oxygen. For example, iron can oxidise to form rust.
piv	Dt ed point on which something else turns or balances.
